

Valuation Methodology

Output-based valuation (internal policy VP-2025-03)

The data asset is valued at its modelled output value: the incremental economic output attributable to the availability of verified sector-level ESG data for the 10-sector matrix. For block ESG-DA-2026-001 the output value is USD 1,000,000.

Token supply equals the output value in USD, so one token represents one USD of output. Transfers record the token price and total value in the accounting memo; no revaluation happens on-chain.
