

Data Lineage Map

Source documents (statistical tables, GRI reports, ESRS filings) -> extraction (API import, OCR, manual entry) -> 01_Raw_Data CSV tables -> 02_Metrics_Calculations workbooks -> valuation and audit documents.

Every stage records the sha256 of its outputs in 03_Verification_Docs/audit_trail.json; the README_manifest.json lists the final hash of every file in this package.
